**Control valves  
RV 502**

## Kv coefficient calculation

Calculation itself is carried out with respect to conditions of regulating circuit and operating medium according to equations mentioned below. Control valve must be designed to be able to regulate maximal flow quantity at given operating conditions. At the same time it is necessary to check whether minimal flow quantity can be even regulated or not. Because of eventual minus tolerance 10% of  $Kv_{100}$  against  $Kvs$  and requirement for possible regulation within range of maximal flow (decrement and increase of flow), producer recommends to select  $Kvs$  value higher than maximal operating  $Kv$  value:

$$Kvs = 1.2 \div 1.3 \text{ Kv}$$

It is necessary to take into account to which extent  $Q_{max}$  involve "precautionary additions" that could result in valve oversizing.

## Relations of Kv calculation

	Pressure drop $p_2 > p_1/2$ $\Delta p < p_1/2$	Pressure drop $\Delta p \geq p_1/2$ $p_2 \leq p_1/2$
$Kv =$	Liquid	$\frac{Q}{100} \sqrt{\frac{p_1}{\Delta p}}$
	Gas	$\frac{Q_n}{5141} \sqrt{\frac{p_n \cdot T_1}{\Delta p \cdot p_2}}$
	Superh. steam	$\frac{Q_m}{100} \sqrt{\frac{v_2}{\Delta p}}$
	Sat. steam	$\frac{Q_m}{100} \sqrt{\frac{v_2 \cdot x}{\Delta p}}$

## Above critical flow of vapours and gases

When pressure ratio is above critical ( $p_2/p_1 < 0.54$ ), speed of flow reaches acoustic velocity at the narrowest section. This event can cause higher level of noisiness and then it is convenient to use a throttling system ensuring low noisiness (multi-step pressure reduction, damping orifice plate at outlet).

## Cavitation

Cavitation is a phenomenon when there are steam bubbles creating and vanishing in shocks - generally at the narrowest section of flowing due to local pressure drop. This event

## Dimensions and units

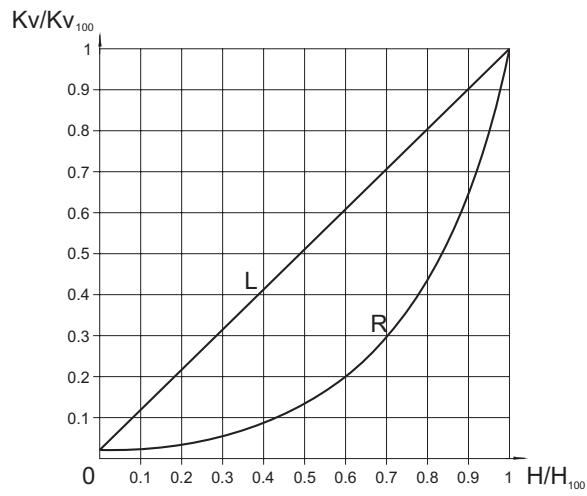

Marking	Unit	Name of dimension
$Kv$	$\text{m}^3/\text{hour}$	Flow coefficient under conditions of units of flow
$Kv_{100}$	$\text{m}^3/\text{hour}$	Flow coefficient at nominal stroke
$Kvs$	$\text{m}^3/\text{hour}$	Valve nominal flow coefficient
$Q$	$\text{m}^3/\text{hour}$	Flow rate in operating conditions ( $T_1, p_1$ )
$Q_n$	$\text{Nm}^3/\text{hour}$	Flow rate in normal conditions ( $0^\circ\text{C}, 0.101 \text{ MPa}$ )
$Q_m$	$\text{kg}/\text{hour}$	Flow rate in operating conditions ( $T_1, p_1$ )
$p_1$	MPa	Upstream absolute pressure
$p_2$	MPa	Downstream absolute pressure
$p_s$	MPa	Absolute pressure of saturated steam at given temperature ( $T_1$ )
$\Delta p$	MPa	Valve differential pressure ( $\Delta p = p_1 - p_2$ )
$\rho_1$	$\text{kg}/\text{m}^3$	Process medium density in operating conditions ( $T_1, p_1$ )
$\rho_n$	$\text{kg}/\text{Nm}^3$	Gas density in normal conditions ( $0^\circ\text{C}, 0.101 \text{ MPa}$ )
$v_2$	$\text{m}^3/\text{kg}$	Specific volume of steam when temperature $T_1$ and pressure $p_2$
$v$	$\text{m}^3/\text{kg}$	Specific volume of steam when temperature $T_1$ and pressure $p_1/2$
$T_1$	K	Absolute temperature at valve inlet ( $T_1 = 273 + t_1$ )
$x$	1	Proportionate weight volume of saturated steam in wet steam

expressively cuts down service life of inner parts and can result in creation of unpleasant vibrations and noisiness. In control valves it can happen on condition that

$$(p_1 - p_2) \geq 0.6 (p_1 - p_s)$$

Valve differential pressure should be set the way so that neither any undesired pressure drop causing cavitation can occur, nor liquid-steam(wet steam) mixture can create. Otherwise it must be taken into account when calculating  $Kv$  value. If the creation of cavitation still threatens, it is necessary to use a multi-step pressure reduction.

## Valve flow characteristics

L - linear characteristic

$$Kv/Kv_{100} = 0.0183 + 0.9817 \cdot (H/H_{100})$$

R - equal-percentage characteristic (4-percentage)

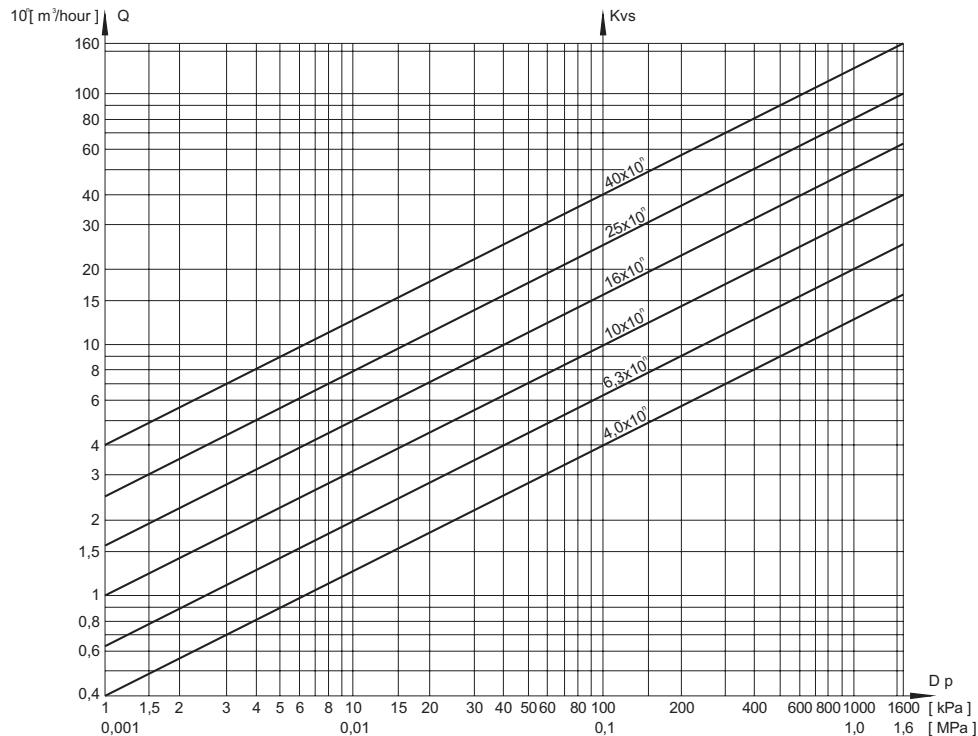

$$Kv/Kv_{100} = 0.0183 \cdot E^{(4 \cdot H/H_{100})}$$

## Rangeability

Rangeability is the ratio of the biggest value of flow coefficient to the smallest value. In fact it is the ratio (under the same conditions) of highest regulated flow rate value to its lowest value.

The lowest or minimal regulated flow rate is always higher than 0.

## Diagram for the valve Kvs value specification according to the required flow rate of water Q and the valve differential pressure $\Delta p$

The diagram serves to specify the valve Kvs value regarding to the required flow rate of water at a given differential pressure. It can be also used for finding out the differential pressure value of the existing valve in behaviour with the flow rate. The diagram applies to water with the density of  $1000 \text{ kg/m}^3$ .

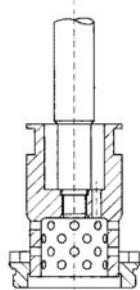

For the value  $Q = q \cdot 10^n$ , it is necessary to calculate with  $Kvs = k \cdot 10^n$ . Example: water flow rate of  $16 \cdot 10^{-1} = 1,6 \text{ m}^3/\text{hour}$  corresponds to  $Kv = 2,5 = 25 \cdot 10^{-1}$  when differential pressure  $40\text{kPa}$ .

### Application of multi-step pressure reduction

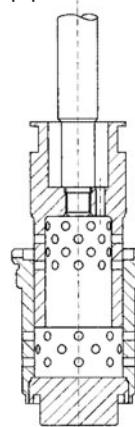

When the valves are designed for operation in above-critical differential pressure ( $p_2/p_1 < 0,54$  when throttling steam and gases), or when diff. pressure value is higher than recommended by the producer, it is effectual to use a throttling system in two or three steps to prevent the cavitation from creating and to ensure both a long service life of the valve inner parts and low noisiness when operating.

When the valves are designed for operation in above-critical differential pressure ( $p_2/p_1 < 0,54$  when throttling steam and gases), or when diff. pressure value is higher than recommended by the producer, it is effectual to use a throttling system in two or three steps to prevent the cavitation from creating and to ensure both a long service life of the valve inner parts and low noisiness when operating.

One-step pressure reduction

Two-step pressure reduction

### Application of orif

In case of above-critical flow, the producer recommends to install one or more orifice plate at the valve outlet to stream-line the process medium flow and to lower the noisiness. The concrete valve execution (No. of orifice plates) is designed according to pressure ratio and it is recommended to consult it with the producer.

### Water injection into outlet pipe

The valve outlet is designed for connection of water injection head VH see catalogue 02-03.2 or drive-steam water injection head VHP. The heads are designed to create tiny water drops independently on injected quantity with regard to their most well-proportioned and quickest spraying and vapoescence. The advantage of this design is a possibility of application of a low-pressure source, distribution and injection water regulation and separation of the valve trim from their effects. The injection water quantity is controlled by a separate control valve.

**Control valves**  
**Inlet DN 25 - 150**  
**Outlet DN 25 - 500**  
**PN 16 - 160**

## Description

The valves with extended outlet series RV 502 are single-seated control valves of a unit construction designed to fit in all demands of an appliance the valve is designed for. The pressure-balanced, multi-step throttling system is always designed to eliminate the valve's high differential pressures with a high resistance to wearing caused by flow and effects of expanding steam. It also ensures a low noisiness level.

The valve can be delivered with weld ends or flanges having faces acc. to the customer's requirements and demands.

The valves are actuated with linear actuators. The connection is designed for using both domestic and foreign actuators of the following producers: ZPA Nová Paka, ZPA Pečky, Regada Prešov, Auma, Schiebel and Foxboro.

## Process media

The valves are especially designed to control the flow and pressure of vapours and gases without impurities. The producer recommends to pipe a strainer into pipeline in front of the valve when impurities are present. Impurities can affect the quality and reliability of regulation and can cause a reduction of the valve service life. The common process media are for example saturated or superheated steam and other media with no special demands on the used type of material of the valve. The valve application for any other media must be consulted with the producer because of the type of material that is in contact with the process medium.

## Technical data

Series	RV 502	
Type of valve	Control valve, single-seated, straight-through, with pressure-balanced plug, with extended outlet and orifice plate at outlet	
Nominal size range	Inlet DN 25 to 40; outlet DN 25 to 500	
Nominal pressure	Inlet PN 16 to 160; outlet PN 16 to 100	
Body material	Carbon steel 1.0619 (GP 240 GH)	Alloy steel 1.7357 (G17CrMo5-5)
Material of weld ends	1.0425 (P 265 GH)	1.7335 (13CrMo4-5)
Seat material: DN 25 - 150	17 021.6 (1.4006)	
Plug material: DN 25 - 150	17 023.7 (1.4078)	
Operating temp. range	-20 to 400°C	-20 to 550°C
Connection flanges	For PN 16 to 100 acc. to ČSN EN 1092-1 (2/2003), for PN 160 acc. to DIN 2548 (4/1969)	
Type of flanges	Type B1 acc. to ČSN EN 1092-1 (2/2003) - raised flange Type F acc. to ČSN EN 1092-1 (2/2003) - female flange Type B2 acc. to ČSN EN 1092-1 (2/2003) - plain flange	
Weld ends	Acc. to ČSN 13 1075 (3/1991)	
Type of trim	One or two-step pressure reduction Perforated plug - seat (cage), orifice plate	
Flow characteristic	Linear, equal-percentage	
Lekage rate	Acc. to ČSN EN 1349 (5/2001) Class III, execution with high level of tightness Class V	
Packing	Graphite	

## Application

The sphere of application of these valves continues in the sphere for the valves series RV 210 to RV 235. They are especially designed for industry applications such as heating plants, power plants or regulation of technological processes. The max. permissible operating pressure values correspond to EN 12 516-1, see page 23 of this catalogue.

## Installation

The valves must be piped the way so that the process medium flow will coincide with the arrows indicated on the valve body. They can be installed in horizontal, vertical or inclined pipeline in any position except the position when the actuator is under the valve body.

## Recommended differential pressures

In regard to the pressure balancing of the plug and to linear forces of usable actuators, the valves' application in high differential pressures is not limited by the forces caused by process medium pressure but by the type of used throttling system. A recommended max. differential pressure for one step of multi-step pressure reduction is 5.0 MPa when perforated plug and perforated cage are used. It is recommended to consult the concrete cases with the producer with regard to pressure ratio and parametres of other equipment.

## Range of Kvs values

DN	25/XXX	40/XXX	50/XXX	65/XXX	80/XXX	100/XXX	150/XXX
Multi-step pressure reduc.							
			Kvs [m³/h] - linear flow characteristic				
1	1.6 - 8.0	2.5 - 20	3.2 - 32	6.3 - 50	8.0 - 80	10 - 125	16 - 250
2	1.25 - 8.0	2.0 - 20	2.5 - 32	5.0 - 50	8.0 - 80	8.0 - 100	12.5 - 250
Multi-step pressure reduc.							
			Kvs [m³/h] - equal-percentage flow characteristic				
1	2.5 - 6.3	6.3 - 16	6.3 - 25	6.3 - 32	16 - 50	16 - 63	32 - 125
2	1.6 - 4.0	5.0 - 10	5.0 - 20	5.0 - 25	12.5 - 40	12.5 - 50	25 - 80

Nominal values of Kvs are understood as multiplies of 10 of the progression of selected number R10 (1.0; 1.25; 1.6; 2.0; 2.5; 3.2; 4.0; 5.0; 6.3; 8.0; 10.0). They are specified individually for

every valve acc. to the customer's requirements and value within the appropriate range shown in the table above. Parameters of outlet (DN, PN) can be modified on request.

## Dimensions and weights for the valve type RV 502 with weld ends

## Technical data

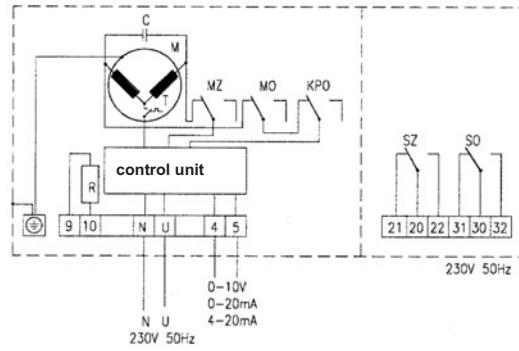

Type	Zepadyn 670 XXX (Zepadyn 524 60.XXXX)
Marking in valve specification No.	ENC
Voltage	230 V or 24 V
Frequency	50 Hz
Power consumption	40 VA
Control	3 - position control, 0 - 10 V, 0(4) - 20 mA
Nominal force	10000 N
Stroke	16, 20 mm
Enclosure	IP 65 (type 524 60 IP 54)
Process medium max. temp.	Acc. to used valve
Ambient temperature range	-25 to 55°C
Ambient humidity limit	10 - 100 % with condensation
Weight	11 kg

## Wiring diagrams

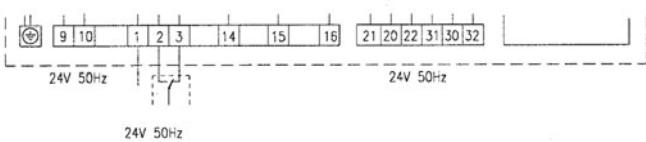

Feeding voltage 230 V/50 Hz

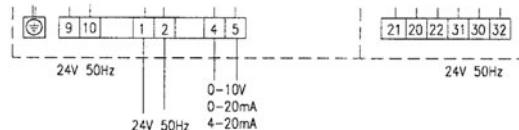

Execution with positioner, feeding voltage 230 V/50 Hz

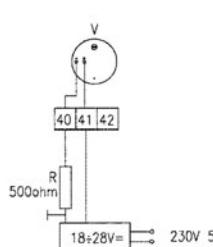

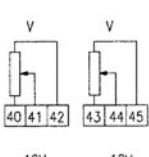

Feeding voltage 24 V/50 Hz

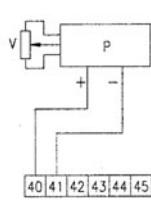

Execution with positioner, feeding voltage 24 V/50 Hz

Execution:  
with resistance transmitter      with capacity position transmitter

with converter  
4-20mA

## Specification of actuator Zepadyn 670 (marking valid from 1. 1. 2001)

	Zepadyn 670	X	X	X	/
Feeding voltage AC	230 V (50/60 Hz)	1			
	24 V (50/60 Hz)	2			
Nominal force [kN]	10			4	
Running speed mm.min <sup>-1</sup>	6,3		1		
	16		2		
	25		3		
	32		4		
Additional accessory	Positioner 0-1 V, 0-10 V, 0(4)-20 mA - without R2				OP1
	Signalization switches SO and SZ				S1
	1 resistance transmitter 100Ω				R1
	2 resistance transmitters 100Ω - without OP1, I1 and C1				R2
	Converter 4 - 20 mA - without R2 and C1				I1
	Capacity transmitter CPT1 - without R2 and I1				C1
	Heater				T1
	Connection - column pitch 132, M20, coupling M10x1, M16x1,5				P3

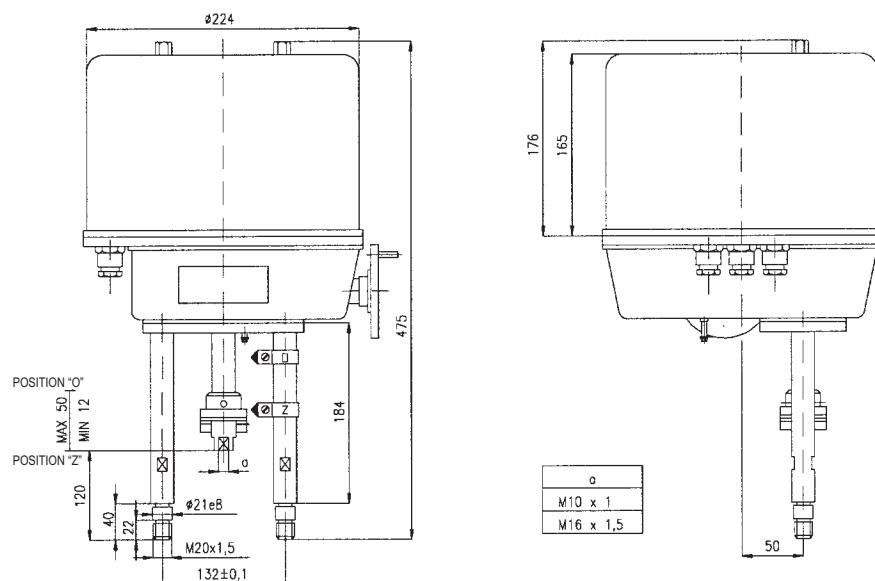

Basic version : 3-position control, hand wheel, limit switches for Open and Closed positions, without transmitter and connection parts.

## Specification of actuator Zepadyn 524 60 (marking valid till 31. 12. 2000)

	Zepadyn 524 60.	X	X	X	X	/

## Dimensions of actuator Zepadyn

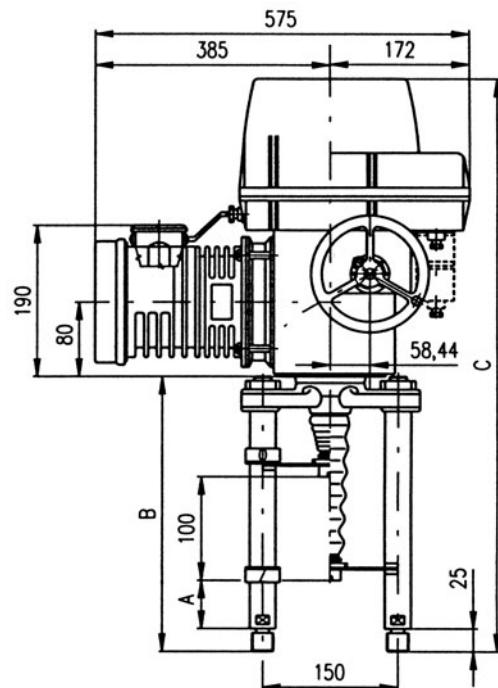

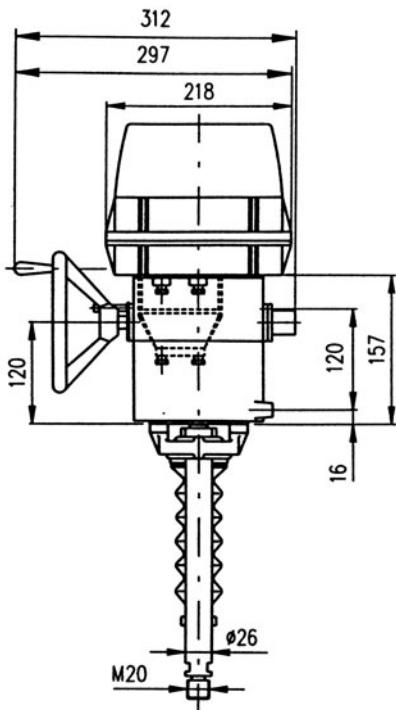

## Electric actuator Modact MTR Regada

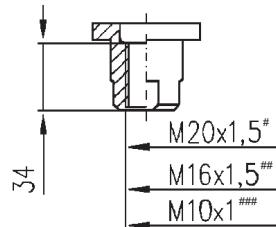

### Technical data

Type	Modact MTR
Marking in valve specification No.	EPD
Voltage	230 V
Frequency	50 / 60 Hz
Motor power	16 or 25 W
Control	3 - pos. c. (in connection with NOTREP positioner - continuous)
Nominal force	10, 16, 25 kN
Travel	12,5 to 100 mm
Enclosure	IP 54 ( IP 65 on request)
Process medium max. temperature	Acc. to used valve
Ambient temperature range	-25 to 50°C
Ambient humidity limit	90 % (tropical execution 100 % condensation)
Weight	27 to 31 kg

Without additional equipment; adjusted max. switching-off thrust from range															0	1			
A	2 additional position switches S5,S6					Z298									0	2			
B	Adjustment of switching-off thrust for required value															0	3		

Combinations available and specification codes: A+B = 07

### Notes:

- 1) State the switching-off thrust in your order by words. If not stated it is adjusted to the maximum rate of the corresponding range. The load torque equals minimally the maximum switching-off thrust of the choosing range multiplied by 1.3.
- 2) The maximum load thrust equals the max. Switching-off thrust multiplied by:
  - 0.8 for duty cycle S2-10 min., Or S4-25%, 6 - 90 cycles per hour
  - 0.6 for duty cycle S4-25%, 90 - 1200 cycles per hour
- 3) The thread in the coupling is to be specified in the order by words.

## Wiring diagram of actuator

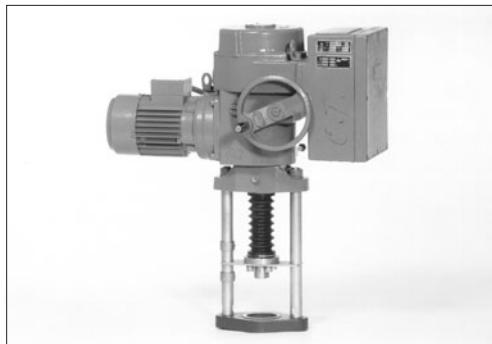

### Notes:

- For the EA version with connection to the terminal board, the terminal 1/60 (the wiring diagrams Z269a and Z260a) is leaded out to the terminal No. 1.
- For EA version with connection to the terminal board the actuator is not equipped by the jumper X3:6-X:7 and X3:2-X:8 (Z296) from manufacturing plant (it is necessary to connect it by customer).

Z5a connection of single resistive transmitter  
 Z6a connection of double resistive transmitter  
 Z10a connection of resistive with current converter of capacitive transmitter - 2-wire without supply  
 Z257b connection of resistive transmitter with current converter - 3-wire  
 Z260a connection of resistive transmitter with current converter - 3-wire with power supply  
 Z269a connection of resistive transmitter with current converter or capacitive transmitter - 3-wire with power supply  
 Z296 connection of 1-phase electric motor  
 Z298 connection of thrust and position switches and space heater

B1 resistive transmitter (potentiometer) single  
 B2 resistive transmitter (potentiometer) double  
 B3 capacitive transmitter  
 S1 thrust switch "open"

## Electric actuators Modact MTN and Modact MTN Control ZPA Pečky

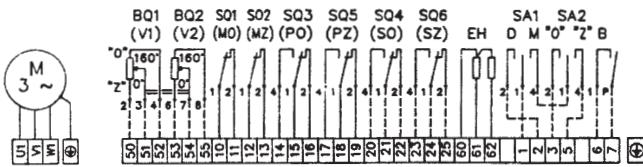

### Technical data

	Modact MTN Control	Modact MTN
Type	EYA	EYB
Marking in valve specification No.		
Voltage	3 x 220 V / 400 V (3 x 220 V/380V)	
Frequency	50 Hz	
Motor power	See specification table	
Control	3 - position control or continuous	
Nominal force	15000 and 25000 N	
Travel	10 to 100 mm	
Enclosure	IP 55	
Process medium max. temperature	Acc. to used valve	
Ambient temperature range	-25 to 55 °C	
Ambient humidity range	5 - 100 % with condensation	
Weight	45 kg	

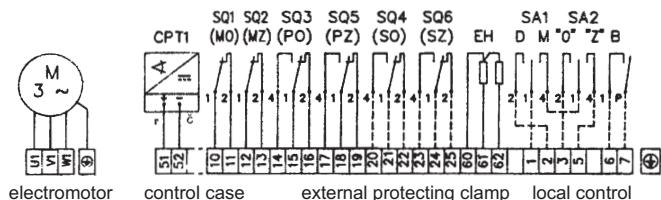

### Wiring diagram of actuator Modact MT

Execution - terminal board

Position transmitter : resistance 2x100 W or without

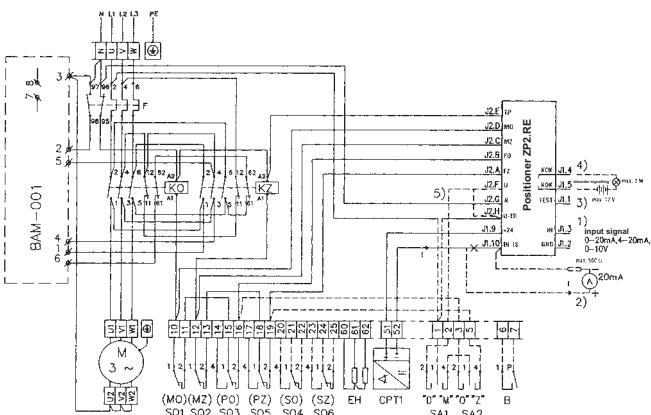

Position transmitter : capacity CPT 1 1/A 4 - 20 mA

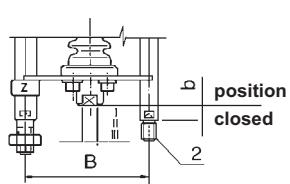

### Wiring diagram of actuator Modact MTN Control

With current transmitter, built-in contactor combination, brake BAM and positioner.

- SQ1 (MO) power switch in "opening" direction
- SQ2 (MZ) power switch in "closing" direction
- SQ3 (PO) limit switch in "opening" direction
- SQ5 (PZ) limit switch in "closing" direction
- SQ4 (SO) signalisation switch in "opening" direction
- SQ6 (SZ) signalisation switch in "closing" direction
- EH heaters 2 x TR 551 10k/A
- CPT1 capacity position transmitter CPT1/A4 - 20 mA
- BAM-001 dynamic brake
- KO contactor in "opening" direction
- KZ contactor in "closing" direction
- F thermal relay
- SA1 control switch "local - remote"
- SA2 switch "open - close"
- BQ1, BQ2 position transmitter 2 x 100 W
- ZP2.RE electronic positioner

### **Technical data**

Type	PB 502		PB 700		PO 1501			
Marking in valve specification No.	PFB		PFC		PFD			
Feeding pressure			0,6 Mpa max					
Function	Fail to open	Fail to close	Fail to open	Fail to close	Fail to open	Fail to close		
Control			Pneumatic signal of 20 - 100 kPa					
			Current signal of 0(4) - 20 mA					
Nominal force				According to table of nominal force values				
Stroke	40 mm		20 a 40 mm		80 mm			
Enclosure				IP 54				
Process medium max. temperature				According to used valve				
Ambient temperature range				-40 to 80°C				
Ambient humidity limit				95 %				
Weight				See table of dimensions				

### **Accessories**

Electropneumatic positioner (analogous) type SRI 990	Device with electric input of 4 to 20 mA and outlet of controlling air into actuator. It is adjusted by switches and potentiometers.
Electropneumatic positioner (intelligent) type SRD 991	Device with electric input of 4 to 20 mA and outlet of controlling air into actuator. It is adjusted by PC and special software. Communication HART, Fieldbus Foundation, PROFIBUS.
Electropneumatic positioner (digital) type SRD 991 - D	Device with electric input of 4 to 20 mA and outlet of contr. air into actuator. It is adjusted by a local keyboard and diodes, possibly on display.
Pneumatic positioner type SRP 981	Device with pneumatic input of 20 to 100 kPa to control the pneumatic actuators with pneumatic control signal
Signalisation switches type SGE 985	Adjustable end position switches
Air set type A 3420	Reduces control air pressure to a value required
Electropneumatic positioner type SRI 986	Analog positioner with input signal of 4 (0) - 20 mA

### **Operating conditions**

Pneumatic actuators FOXBORO can operate with extremely high ambient temperatures with unique resistance to shock loads. They excel with resistance to vibrations and reached 10<sup>6</sup> of cycles in operation. It is possible to deliver the actuator with both fail to open and fail to close function, possibly with a position blocking (air lock) upon feeding pressure air supply failure. Various accessories can be delivered together with the actuator.

### **Direct and indirect functions**

Direct function ensures that actuator's stem retracts upon control air supply failure (valve opens). Indirect function ensures that actuator's stem extends upon control air supply failure (valve closes).

## Dimensions and weights for Foxboro actuators

Type	Actuator							Hand wheel		Weight [kg]	
	A [mm]	B [mm]	C [mm]	G [mm]	H [mm]	J [mm]	T [mm]	D <sub>s</sub> [mm]	E [mm]	Actuator	Act. w. HW
