

GESTRA invests in environmental protection as well as health and safety standards at work

GESTRA has always shown commitment to the above-mentioned tasks by investing in the improvement of the corresponding standards. In 1998 four employees realized a training course of one year to become experts for environmental protection, waste disposal and the prevention of water pollution.

Conforming to legal requirements all our packaging is recycled. Our flexible manufacturing systems in combination with dependable tool management systems ensure a reliable and technically sophisticated manufacturing process. Special attention is given to an economically and ecologically well-balanced use of production utilities, materials, energy and natural resources.

The personal contact with our customers and suppliers as well as the intensive on-job training of our employees lead to constant improvements and new innovations.

We regard legal requirements as minimum standards, which we surpass by far and are constantly looking for more effective ways of reducing emissions and hazardous waste to conserve the natural resources and protect the environment.

GESTRA - The Steam Experts

GESTRA is a global leader in the design and production of valves and control systems for heat and process fluid control. Being a member of the Invensys group, we are capable of offering our customers complete and intelligent solutions engineered to function with maximum reliability.

Our products and services have many practical applications and are employed where

- steam is generated, distributed or used
- fluids flow
- energy saving is possible
- environmental protection and safety-oriented control systems are needed.
