

The RHOMBUS*line* family on the course for the future: The new steam trap MK 45 A stainless steel design

RHOMBUS*line* steam traps are a synonym for ease of installation and maintenance. The new generation of steam traps with rhombus-shaped cover and external strainer can now boast their first **stainless steel** trap. The new **MK 45 A** will be used to meet the extreme demands which are imposed on the material by various processes. The **steel grade DIN 1.4404 (ASTM equivalent A 182F316L)** suits market requirements and makes the steam trap a true all-rounder. The MK 45 A suggests itself also for applications in the pharmaceutical, foodstuffs and cosmetic industries and complements the **STERI*line*** steam trap SMK 22 very well.

The MK 45 A supersedes the old MK 35 stainless steel design and is available **at the same competitive price!**

MK 45 A
PN 40, DN 15 – 25 (1/2 – 1")

*Connections: Flanged to DIN and ASME (ANSI), screwed sockets, socket-weld ends.
On request at extra cost design according to TRD 110/TRB801.*
